## PREFACE

The Australian Standard Commodity Classification (ASCC) has been developed by the ABS to facilitate the compilation of comparable Australian production, import and export commodity statistics, and to serve as a framework within which ABS commodity and activity classifications are integrated and maintained in a coordinated manner to promote comparability between them and with relevant international standards.

In order to best serve these purposes the ASCC has been constructed as an 'industrial origin' commodity classification in which the broadest level categories are industry of origin headings, based on the industries in the Australian Standard Industrial Classification (ASIC), below which are arrayed (as lower level categories, i.e. as six and eight digit ASCC items) the commodities which typically originate in them. Each of these ASCC items is composed of and represents the most detailed concordance between the, usually, more detailed production, import and export commodity items (from the separate ABS classifications of these items) in accordance with which basic ABS production, import and export commodity statistics are collected and/or compiled and published.

The ASCC, as developed hitherto, covers transportable goods originating in agricultural, fishing, mining and manufacturing industries.

In addition to being kept up to date on an annual basis, the classification is also being subjected to on-going systematic reviews with the object of improving the classification in response to user demands for more useful and comparable commodity statistics.

This classification is published in two parts. This part includes the introductory material, the summary classification and various keys linking production, import, tariff and export commodity items to ASCC items, while Part 2 presents the 'Detailed Classification' which shows for each ASCC item its component production, import and export commodity items.

## INTRODUCTION

## PURPOSE OF THE ASCC

1 The Australian Standard Commodity Classification (ASCC) is one of several ABS commodity classifications and has been designed (unlike most of the other individual collection oriented commodity classifications) as a multi-purpose classification with the following objectives:

(i) to serve as a standard commodity classification whose items are suitable for the compilation and analysis of comparable production, import, export and, eventually, other commodity statistics (collected usually, in the first instance, in greater detail in accordance with separate special purpose, i.e. collection oriented, ABS commodity classifications in different statistical series); and

(ii) to serve as a standard framework which integrates ABS commodity and activity classifications and ensures that revisions to them, as well as the work giving rise to these revisions (such as their regular maintenance, their review or their overhaul in response to changes in international standards) is fully coordinated and is, among any other objectives, aimed at preserving or improving:

- comparability between Australian special purpose production, import, export and other commodity classifications,
- links between commodities and industries, and
- comparability between Australian and international commodity classifications.

2 By enabling Australian commodity statistics from different collections or series to be compared with each other and to be linked to industries, the ultimate purpose of the ASCC is to facilitate the use of Australian commodity statistics by government and private organisations in such applications as analysis of the relationships of import employment, industrial structure and tariff provisions, studies of import competition and replacement, submissions to the Industries Assistance Commission, the estimation of market shares, the compilation of input-output tables (see also paragraphs 11 and 12 below) and the conduct of trade and tariff negotiations, e.g. within the framework of GATT (the General Agreement on Tariffs and Trade).

## NATURE OF THE ASCC

3 In order to effectively perform the functions for which it was designed the ASCC has been constructed as a 'composite framework' classification, i.e. as a type of classification whose categories are composed from those of other classifications with the intention of integrating them into a coherent system of classifications to enable strong formal links and mutual interrelationships between them to be established and maintained. Mere keys or concordances between different

classifications are not usually as effective for this purpose (because of their normally more passive role in portraying links between independently maintained classifications), whereas composite framework classifications, such as the ASCC, are mutually interlocking and interdependent systems whose composite categories have a statistical use in their own right and also serve to positively promote comparability between all the component classifications in such systems.

4. At the present stage of its development the ASCC covers transportable goods only and incorporates and relates all the relevant most detailed categories from the following ABS classifications:

- (i) the production commodity classifications for goods originating in the agricultural, fishing, mining and manufacturing industries,
- (ii) the Australian Import Commodity Classification (AICC),
- (iii) the Australian Export Commodity Classification (AECC), and
- (iv) the Australian Standard Industrial Classification (ASIC).

Brief descriptions of the above listed commodity classifications and of the statistics collected, compiled and published in accordance with them are provided in paragraphs 13 to 22 below.

5. Construction of the ASCC as a 'composite framework' classification which incorporates and relates within itself the ASIC industry as well as the production, import and export commodity classification categories, mentioned above, has been achieved:

- (i) by structuring the ASCC as an 'industrial origin' commodity classification, i.e. as a hierarchic classification in which the broadest level categories consist of industry of origin headings (each equivalent to a four digit ASIC class or, in a few cases, to several such classes) below which are arrayed (as lower level categories, i.e. as six and eight digit ASCC Items), the commodities which typically originate in them. (Paragraphs 23 to 29 below as well as the sections of the classification which set out the 'Broad Structure of the ASCC' and the 'Summary Classification' can be referred to for further information on this aspect of the classification.); and
- (ii) by composing the six and eight digit ASCC Items (i.e. the standard commodity item in the ASCC) in such a manner that:
  - each six digit ASCC Item represents the most detailed concordance that could be devised between the most detailed production, import and export commodity items from the classifications listed in paragraph 4(i) to (iii) above, and
  - each eight digit ASCC Item represents the most detailed concordance that could be devised (within the relevant six digit ASCC Item) between the component production and import commodity items or production and export commodity items of the six digit ASCC Item.

6 In addition to composing the six and eight digit ASCC Items in the manner described, it is also intended that they satisfy (subject to constraints imposed by the ability of respondents to supply production, import and export commodity statistics and the ability of the ABS to process and disseminate the statistics) the following criteria:

- (i) that each ASCC Item (and, by implication, each of its component items) relate to only one industry, i.e. single ASIC class,
- (ii) that each ASCC Item covering transportable goods (and, by implication, each of its component items) correspond at least to a single five digit SITC item (or part of such an item), and
- (iii) that the ASCC Items meet user needs, in terms of detail and other requirements, for comparable production, import and export statistics.

7 The nature of ASCC Items is described in more detail in paragraphs 32 to 53 below and the 'Detailed Classification' shows for each ASCC Item its component production, import and export items.

#### CURRENT STATUS, MAINTENANCE AND FUTURE DEVELOPMENTS

8 The ASCC, as it now stands, covers transportable goods, is kept up to date annually and goes some considerable way towards meeting the objectives outlined in paragraphs 1 and 2 above.

9 However, it still needs to be improved, expanded to include other classifications of transportable goods and extended to cover non-transportable goods and services. As far as the improvements are concerned, these need to be made to all those ASCC Items which could not be fully developed during the first stage of the ASCC development or upgraded since then. (During that first stage it was generally not possible to change most of the then existing production, import and export commodity items in the process of establishing concordances between them. As a result many of the original concordances, expressed in the form of ASCC Items, represented somewhat haphazard conglomerations of commodities which did not fully satisfy the criteria in paragraph 6 above.)

10 In this context work is proceeding along the following lines:

- (i) REGULAR MAINTENANCE OF THE ASCC. This involves keeping the present contents of the ASCC up to date, largely in response to exogenous factors, and preparing and publishing annual revisions of the ASCC in the form of replacement pages. The exogenous factors include:

- ad hoc requests to change either particular ASCC Items or particular production, import or export commodity items,
- ABS reviews of its special purpose production, import or export commodity classifications or their overhaul as a result of revisions to the SITC-CCENTHS group of classifications, and
- revisions to ASIC.

The processing of the ad hoc requests and the conduct of the reviews, mentioned above, is coordinated throughout the ABS to ensure that it is undertaken within the framework of the ASCC and that the resultant changes to the ASCC and its component classifications are mutually consistent and in accordance with ASCC objectives.

(ii) **SYSTEMATIC REVIEWS OF THE ASCC.** These are undertaken to systematically improve the types of unsatisfactory ASCC Items mentioned in paragraph 9 above. For this purpose the ASCC is divided into priority ranked segments which are then subjected to review in priority order. These reviews concentrate on the development of more homogeneous and useful ASCC Items, in terms of the criteria postulated in paragraph 6 above, by modifying their component import, export and production items (in their respective classifications) with the object, where necessary, of bringing them up to date, improving their usefulness, making them more practical from a collection viewpoint and increasing the degree of comparability between them.

Another objective which is being pursued in these systematic reviews is the adoption, as far as practicable, of identical units of quantity for all the component production, import and export items of each ASCC item to facilitate comparison of production and overseas trade statistics in terms of quantities.

(iii) **FURTHER DEVELOPMENTS OF THE ASCC.** These include longer term plans to extend the coverage of the ASCC to all goods and services, to incorporate additional series/classifications such as materials used and commodities in the input-output commodity classification, and to develop alternative broad classification structures for presenting the commodity items in the ASCC.

11. The input-output commodity classification, referred to immediately above, is similar to the ASCC in relating commodities locally produced, imported and exported in terms of ASIC industry of origin categories. However, input-output commodity statistics (and the items in accordance with which they are compiled) must relate strictly to ASIC industries of origin, whereas, ASCC Items sometimes cover commodities originating from more than one industry. This is because the ASCC Items are formed from items in the existing separate classifications of locally produced, imported and exported commodities which, for reasons such as data availability, cannot always be defined in strict industry of origin terms. Thus, on the one hand, ASCC Items are specified in terms of the component commodity items defined in the classifications that are related

through the ASCC. In so doing the ASCC establishes direct relatability between itself and the component classifications without resort to imputation. Where the practicalities of collection require component commodities to be defined broadly so as to embrace more than one industry of origin, ASCC items may be similarly constrained. On the other hand, the input-output commodity items are specified in strict industry of origin terms. This necessitates classifying or linking some commodities (as defined in particular underlying commodity classifications) to more than one input-output commodity item. This limitation is overcome in practice by allocation of such commodities using special investigations and imputations.

12 Data items in the separate classifications of locally produced, imported and exported commodities will, in the systematic reviews of the ASCC, be increasingly defined along industry of origin lines within the framework of the ASCC while maintaining the constraint that data are capable of being collected in those terms. This development will improve the basic data needed for input-output compilations but will not obviate the need for a separate input-output commodity classification. The input-output classification will continue to be maintained for purposes where a strict industry of origin classification is required, and the concordance between it and the ASCC will be expressed in a future edition of the ASCC.

#### INCORPORATED COMMODITY CLASSIFICATIONS

13 The following paragraphs provide brief descriptions of, or references to, the production, import and export commodity items which have been incorporated and related within the ASCC, of the classifications which contain these items (in cases where explicit classification manuals exist) and of the statistics produced in accordance with them.

#### Production Commodities Originating in ASIC Division A: Agriculture, Forestry, Fishing and Hunting.

14 The Agricultural production commodity items shown in this edition of the ASCC are those for which statistics of value of production are published in the ABS publication "Value of Agricultural Commodities Produced, Australia" (7503.0). The items do not, however, cover all agricultural commodities produced - i.e. there are some "gaps" in the coverage of the production items. (Further information on the reasons for and the nature of the "gaps" is included in paragraph 37.)

15 The Fishing production commodity items shown in this edition of the ASCC are those for which statistics are published in the ABS publication "Fisheries, Australia" (7603.0). The items do not, however, cover all fishing commodities produced - i.e. there are some "gaps" in the coverage of the production items. (Further information on the reasons for and the nature of the "gaps" is included in paragraph 37.)

### Production Commodities Originating in ASIC Division B: Mining

16 The Mining production commodity items shown in this edition of the ASCC are those for which statistics of minerals produced are published in the ABS publication "Mineral Production, Australia" (8405.0).

### Production Commodities Originating in ASIC Division C: Manufacturing

17 Statistics are collected for more than three thousand commodity items of production in the annual census of manufacturing establishments. The items do not, however, cover all manufactured goods - i.e. there are some "gaps" in the coverage of the production items. (Further information on the reasons for and the nature of the "gaps" is included in paragraph 37.) Details of quantity produced and quantity and value of sales and transfers out are collected for these items. However, not all of the measures are collected for all of the items, e.g. for some items details of value of sales and transfers out only are collected. The statistics are published in the ABS publication "Manufacturing Commodities, Principal Articles Produced, Australia" (8303.0) and other ABS publications.

18 In addition, statistics are collected in the monthly and quarterly production collections for selected items. These items are generally identical to items for which statistics are collected in the annual census of manufacturing establishments. However, only details of quantity produced are collected monthly and quarterly. These statistics are published in the monthly "Production Bulletin" publications (8357.0 to 8364.0) and other ABS publications.

19 It should be noted that value statistics collected for manufactured commodities relate to sales and transfers out, while value data compiled for other production commodities referred to above, relate to value of production.

### Import Commodities

20 Import statistics, relating to all goods imported directly for domestic consumption plus goods imported into bonded warehouses, are compiled for the detailed items of the Australian Import Commodity Classification (AICC) (1204.0) which is essentially an elaboration of the current SITC. The value of imports is compiled for all AICC items and, in addition, quantity of imports is compiled for most of the items. The statistics for detailed commodity items are available monthly through a subscription service operated by the ABS and, in some cases, in ABS publications. Statistics are published annually in the publication "Overseas Trade, Australia, Part 1: Exports and Imports" (5409.0) and in other ABS publications.

### Import Clearance Commodities

21 Import clearance statistics, relating to all imported goods cleared through Customs directly for domestic consumption plus imported goods cleared from bonded warehouses for domestic consumption, are compiled for the detailed items of the statistical code in the "Annotated Customs Tariff" which is an elaboration of the current CCCN. The statistical code items have a one to one or a many to one relationship with AICC items. Value of import clearances and duty paid are compiled for all statistical code items and, in addition, quantity of import clearances is compiled for most of the items. The statistics are available monthly through a subscription service operated by the ABS.

### Export Commodities

22 Export statistics are compiled for the detailed items of the Australian Export Commodity Classification (AECC) (1203.0) which, like the AICC, is an elaboration of the current SITC. Value of exports and gross weight are compiled for items covering all goods and quantity of exports is compiled for most of the items. The statistics for detailed commodity items are available monthly through a subscription service operated by the ABS and, in some cases, in ABS publications. Statistics are published annually in the publication "Overseas Trade, Australia, Part 1: Exports and Imports" (5409.0) and in other ABS publications.

## STRUCTURAL CHARACTERISTICS OF THE ASCC

### Industry of Origin

23 The ASCC, as mentioned in paragraph 5, has been developed to date as an "industrial origin" commodity classification in order to provide, in accordance with objectives outlined in paragraph 1, explicit links between commodities and industries.

24 In an industrial origin commodity classification, commodities are grouped according to the industries in which they typically originate. This means that in such a classification the categories at its broadest hierarchic level consist of industry of origin headings, and that detailed commodity items are shown under each such industry of origin heading to cover the types of commodities which typically originate in the industry. As a result each commodity item in such a classification is shown only under one industry heading, i.e. the industry to which its production is primary according to the relevant industry classification.

25 In practice of course, many commodities are produced by industries to which they are not primary and an industrial origin commodity classification should therefore not be confused with a cross classification of commodities by industry of production. The latter lists under each industry all the commodities which are actually produced in the industry, so that an individual commodity would be shown under all the industries

in which it is actually produced. Commodity statistics should, where appropriate, be interpreted accordingly.

26 The broad structural industry of origin categories in this edition of the ASCC are based on the industries in the Australian Standard Industrial Classification (ASIC) published by the ABS (Volume 1 - The Classification, 1201.0; Volume 2 - Alphabetic Index, 1202.0). Generally each ASCC industry of origin category is equivalent to a class in the ASIC. However, in some cases two or more ASIC classes have been combined for purposes of the ASCC to form a special "combined class", i.e. a single industry of origin category. This has been necessary in cases where many ASCC Items each combine commodities originating in two or more ASIC classes. A continuing aim in the further development and maintenance of the ASCC is the elimination of such combined classes as far as possible by attempting to amend ASCC Items in such a way that each ASCC Item covers only commodities originating in a single ASIC class.

27 The ASCC industry of origin categories are identified by four-digit code numbers. Where an industry of origin category is equivalent to an industry class in ASIC, the ASCC industry of origin category is identified by the four-digit code number which is used to identify the class in the ASIC. Where an industry of origin category represents a combination of two or more ASIC classes, a four-digit code not used anywhere in the ASIC has been adopted.

28 An example of an ASCC industry of origin category which is equivalent to an ASIC class is class 2115 "Meat (except smallgoods or poultry)". An example of an ASCC industry of origin category which is equivalent to a combination of two ASIC classes is class 2539 "Log Sawmilling and Resawn and Dressed Timber" which is formed by combining ASIC classes 2531 "Log Sawmilling" and 2532 "Resawn and Dressed Timber".

29 The broad structural industry of origin categories in this edition of the ASCC are formed from the ASIC classes in ASIC Divisions A, B and C (except the ASIC classes relating to Forestry, Hunting, Services to Agriculture and Services to Mining).

#### Correspondence with SITC

30 It is a basic objective of the ASCC to ensure that as far as possible ASCC Items are defined in accordance with the commodity definitions in the SITC. This means that when ASCC Items are amended or redefined every effort is made to ensure that each ASCC Item will correspond to a single detailed item in the SITC, or a part of a single detailed SITC item.

31 The SITC has a one to one correspondence, at the detailed item level, with the headings and statistical subheadings of the Customs Cooperation Council Nomenclature (CCCN) - which was formerly known as the Brussels Tariff Nomenclature (BTN). The SITC and the CCCN are widely known and widely used throughout the world as a basis for other commodity classifications, and are supported by extensive definitional material in the CCCN Explanatory Notes.

## STANDARD COMMODITY ITEMS

### General

32 The standard commodity items, i.e. the ASCC Items, in this manual have been formed, as explained in paragraph 5 above, from detailed production, import (AICC) and export (AECC) items and represent the most detailed concordances between them. Thus ASCC Item 2341.05, "Cotton seeds" has as its components:

. Production item:

383.01 Cotton seeds

. AICC item:

222.30.00 Cotton seeds

. AECC item:

222.30.00 Cotton seeds

33 However, in a large number of cases ASCC Items are more broadly defined so that each one covers a number of production, AICC and AECC commodity items. For example, ASCC Item 2344.05 "Pile fabrics and chenille fabrics, broadwoven, of man-made fibres" has as its components the following items:

. Production items:

Broadwoven pile and chenille fabrics of, or predominantly of, man-made fibres:

385.17 - Terry towelling and similar terry fabrics  
385.19 - Other

. AICC items:

Pile fabrics and chenille fabrics, woven, of man-made fibres (other than fabrics falling within heading 656.01):

- Synthetic:  
653.97.03 - - Chenille fabric  
653.97.05 - - Velvets  
653.97.07 - - Velveteens  
653.97.19 - - Other  
- Regenerated:  
653.98.05 - - Velvets  
653.98.19 - - Other

AECC items:

- Pile fabrics and chenille fabrics, woven, of man-made fibres (other than fabrics falling within heading 656.01):
- 653.97.00 - Synthetic
  - 653.98.00 - Regenerated

34 It should be noted in both examples above that the standard (ASCC) items represent the MOST DETAILED CONCORDANCE between production, AICC and AECC items - i.e. the set of most detailed items for which comparable statistics of production, imports and exports can be compiled.

Six-Digit ASCC Items

35 ASCC Items which represent the most detailed concordances between "PRODUCTION, AICC AND AECC" items are identified by six-digit code numbers (the first four digits of which represent their industry of origin).

Eight-Digit ASCC Items

36 In many cases a six-digit ASCC Item can be subdivided into more detailed categories representing the most detailed concordances between "PRODUCTION AND AICC" items or between "PRODUCTION AND AECC" items. In these cases, further ASCC Items have been formed representing the more detailed categories, and such ASCC Items are identified by eight-digit code numbers (the first six digits of which represent the code number of the six-digit ASCC Item). For example, ASCC Item 2351.05 "Bed linen, of woven cotton fabrics" is subdivided into ASCC Items 2351.05.05 "Sheets, pillowcases and bolster cases" and 2351.05.10 "Other (including mattress covers and protectors)" (which represent the most detailed concordances between production and AICC items).

Production Gap Situations

37 It was mentioned earlier that the production commodity items do not cover all transportable goods originating in ASIC Divisions A "Agriculture, Forestry, Fishing and Hunting", B "Mining" and C "Manufacturing" - i.e. that there are "gaps" in the coverage of production items. In the case of manufacturing production commodity items, in a sense there are no "gaps" in the coverage because at the end of the list of manufacturing commodity items there are items 999.91 and 999.92 for "All other articles", which, of course, make the list exhaustive of all manufactured goods. However, these items cover such a miscellaneous and diverse range of commodities that they had to be disregarded for purposes of the ASCC, i.e. it was not possible to show them as component production items of any ASCC Items and thus, to this extent, production statistics compiled according to the ASCC will be incomplete. In addition there are a small number of other manufacturing production items which each cover a wide range of commodities and which have also been disregarded for purposes of the ASCC. In the case of agricultural, fishing and mining commodities, all

existing production items are shown in this edition of the ASCC. However, "gaps" are present and these generally fall into two categories. First there are cases where Australian production items have not been established because Australian production for these items is not significant. Examples are production from snake farms and production of natural sponges. The second category covers commodities for which there is overseas trade but for which, due to climatic, technological or other factors, there is no Australian production and therefore no Australian production items. Examples of these are production of natural rubber and of black coal briquettes.

38 The existence of "gaps" in the coverage of the production items means that, for some ASCC Items, some or all of the commodities covered by the ASCC Items are not included in specific production items. Where this occurs the ASCC Items have "production gaps". In the case where all of the commodities covered by the ASCC Item are not included in specific production items (i.e. in the case of a "complete production gap"), a note to indicate this is shown under the ASCC Item title in the "Component Production Item(s)" column in the "Detailed Classification" (Part 2), of this manual, e.g. in the case of ASCC Item 2352.45.10. In the case where only some of the commodities covered by the ASCC Item are not included in specific production items (i.e. in the case of a "partial production gap"), a footnote to indicate this is referred to after the last component production item shown under the ASCC Item, e.g. footnote (b) after production item 384.09 under ASCC item 2343.40.

#### Surplus and Deficiency Situations

39 In many instances an ASCC Item has been formed without there being an exact concordance between the component production, AICC and AECC items. This has been done in instances where it is considered that the concordance, while not exact, is probably good enough for most working purposes. This approach has enabled the formation of more useful ASCC Items than would be the case if ASCC Items had been formed only at broader levels where exact concordances could be obtained between production, AICC and AECC items.

40 The formation of ASCC Items without exact concordances between the component production, AICC and AECC items implies that, for such ASCC Items, the component production, AICC and/or AECC items cover a wider or narrower range of commodities than is covered by the ASCC Item. The surpluses and deficiencies in the range of commodities covered by a set of component production, AICC or AECC items are indicated in footnotes in the "Detailed Classification" (Part 2), of this manual. Examples are:

\* Footnote (a) (a "deficiency footnote"), referred to after the last component AECC item shown under ASCC Item 2163.00 "Biscuits, ice cream cones and wafers", which indicates that the component AECC items do not cover biscuits put up as confectionery, which are relevant to ASCC Item 2163.00 (and that these commodities are included in AECC item 048.42.29 which is a component of ASCC Item 2162.00).

. Corresponding to this, footnote (d) (a "surplus footnote"), shown against AECC item 048.42.29 under ASCC Item 2162.00 which indicates, inter alia, that the AECC item includes biscuits put up as confectionery, which are not relevant to ASCC Item 2162.00.

41 In a small number of cases ASCC Items have been formed with "complete" production, import or export deficiencies. This has been done only in instances where the deficiency is thought to be negligible in terms of value, and, particularly, where it seems to be advantageous to have the deficiency in order to be able to devise an ASCC Item which fits better into the ASIC industry of origin structure. Examples are:

. ASCC Item 1112.00, which has a complete import deficiency (indicated by footnote (a)).

. ASCC Item 2161.00, which has a complete export deficiency (indicated by footnote (d)).

#### Duplication in ASCC Item Contents

42 It is generally regarded as undesirable for a single ASCC Item to include both finished goods and the parts or materials of which the goods are made. This is so because statistics for such an ASCC Item could include "duplication", i.e. both the components and the subsequently completed goods made from the components could be covered by the statistics. In such situations the meaningfulness of assessments of the degree of import competition, apparent market supplies and export performance, based on the production, import and export statistics for the ASCC Item, would be questionable.

43 For this reason, in cases where it has not been possible to form separate ASCC Items for materials and components, on the one hand, and completed goods of the type made from those materials and components, on the other hand, a "duplication footnote" has generally been shown against the ASCC Item which covers both the materials and components and the completed goods, pointing out the duplication and suggesting that caution should be exercised when comparing details of production and overseas trade for the ASCC Item, e.g. footnote (b) shown against ASCC Item 2343.15 in the "Detailed Classification" (Part 2), of this manual.

44 It is an aim of the systematic reviews of the ASCC to eliminate the remaining duplication situations as far as possible, i.e. to form separate ASCC Items for materials and components, on the one hand, and completed goods, on the other hand, as far as possible.

#### Out of Class and Class Omission Situations

45 In general each ASCC Item is wholly 'primary' to the industry under which it is listed, i.e. its production is covered solely by

the primary activities of the industry. However, in some cases, an ASCC Item is partially primary to an industry other than the one under which it is listed, e.g. ASCC Item 2355.20 "Textile cords, braids and the like, of a kind commonly used in machinery or plant" which covers the following commodities:

- . Textile cords and the like (except braids), of a kind commonly used in machinery or plant, which are primary to class 2355 (i.e. the class under which ASCC Item 2355.20 is listed).
- . Textile braids, of a kind commonly used in machinery or plant, which are primary to class 2348.

This has been termed an "out of class" situation and is indicated, in this instance, by the out of class footnote, "(a)", shown against ASCC Item 2355.20 in the "Detailed Classification" (Part 2), of this manual.

46 Corresponding to each "out of class" situation there is, in general, a situation where some of the commodities primary to a class are not covered by the ASCC Items listed under the class. For example, textile braids, of a kind commonly used in machinery or plant, which are primary to class 2348, are not included in any ASCC Item listed under that class. This has been termed a "class omission" situation, and is indicated, in this instance, by the class omission note shown immediately after the description of the industry of origin category for class 2348 in the "Detailed Classification" (Part 2), of this manual.

47 It is an aim of ASCC systematic reviews and of ASCC maintenance to eliminate the remaining out of class and class omission situations as far as possible by attempting to change commodity items in such a way that each ASCC Item will cover only commodities that are primary to a single ASIC class.

#### Suitability of ASCC Items for Commodity Statistics in Terms of Quantities

48 It is not possible to compare production and overseas trade in terms of quantities for many ASCC Items, either because quantity details are not (and in many cases, cannot meaningfully be) compiled for all of the component production, AICC and AECC items, or because different units of quantity are used for different component items in the different series. Accordingly, the emphasis in the development of the ASCC so far has, of necessity, been on the formation of ASCC Items providing for the comparison of production and overseas trade in terms of values. This fact has affected the way in which ASCC Items have been defined in some instances, as explained in the following paragraph.

49 For purposes of determining the most detailed concordances between production, AICC and AECC items in formation as ASCC Items, those production and AECC items for which value data are not compiled

(i.e. items for which only quantity data are compiled) had to be disregarded. For instance, with regard to production items, in the formation of ASCC Item 3243.00 "Locomotives, railway rolling stock, tramcars, trolley cars and parts therefor; hovertrains", the only production items which could be taken into account are 571.10 "Railway and tramway equipment (details of units actually completed during the year, including complete units assembled partly or wholly from purchased components)" and 578.11 "Forged tyres and wheels of iron or steel". All the other production items shown as components of ASCC Item 3243.00 (such as 571.11 "Electric locomotives") are dissections of item 571.10 for which the values of sales and transfers out are not collected and compiled - the values of sales and transfers out for these component items of item 571.10 are included in production item 571.10. For this reason more detailed ASCC Items could not have been formed for these "narrower" commodities as might otherwise have been possible.

50 In the systematic reviews of the ASCC it is proposed to give attention to units of quantity, with the aim of adopting identical units of quantity for all the component production, AICC and AECC items of an individual ASCC Item, as far as practicable.

#### Treatment of Waste and Scrap

51 Waste and scrap as such are covered by the ASCC in some cases but not in others. Waste and scrap occur in two ways: firstly, waste and scrap occur as by-products of production processes (e.g. sawdust), and secondly, through wear and tear or obsolescence (e.g. clothes discarded because they have become worn out or because they have gone out of fashion). Waste and scrap occurring in the second way (i.e. wear or obsolescence) are not covered by the ASCC, and waste and scrap occurring in the first way (i.e. as a by-product of a productive process) are covered generally only if there are production items.

#### Treatment of Used or Secondhand Goods

52 Used or secondhand goods as such are not covered by the ASCC. (In cases where AICC and AECC items cover both new and used goods, for purposes of the ASCC the actual imports or exports of used goods is assumed to be negligible.)

#### Treatment of Commodities and Transactions Not Included in Merchandise Trade

53 Commodities and transactions not included in merchandise trade (i.e. Section 9(b) in the AICC and AECC) are also not covered by the ASCC.

## STATISTICS CLASSIFIED ACCORDING TO THE ASCC

54 Users who wish to compile comparable commodity statistics may do so by referring to ABS publications which include statistics of the relevant production series, (e.g. "Value of Agricultural Commodities Produced, Australia" (7503.0); "Fisheries, Australia" (7603.0); "Mineral Production, Australia" (8405.0); "Manufacturing Commodities, Principal Articles Produced, Australia" (8303.0)) and those which include statistics on overseas trade commodities (e.g. "Overseas Trade, Australia, Part 1 : Exports and Imports" (5409.0)).

## FACTORS AFFECTING COMPARISONS OF PRODUCTION AND OVERSEAS TRADE COMMODITY STATISTICS

55 In using the ASCC for compiling comparable commodity statistics of imports, exports and Australian production a number of factors should be taken into account which can, depending on the nature of the analysis being undertaken, variously affect the comparability of the data. These factors could be viewed as falling into basically the following two categories:

- . Problems of classification.
- . Other problems.

56 The problems in the first category relate to situations in the ASCC where it has not yet been possible to introduce full comparability between equivalent items of imports, exports and production, or where there are other deficiencies in the manner in which commodity items are defined in the ASCC and its related classifications. These matters have been discussed in earlier parts of the Introduction and the ASCC systematic reviews are in large part directed at eliminating or at least reducing these kinds of problems.

57 The problems in the second category relate mainly to issues of measurement, collection of the data, etc., i.e. matters which cannot usually be solved by altering the ASCC or its related classifications. The main kinds of problems or difficulties involved would include the following:

- . Difficulties due to the use of different bases of valuation of production, imports and exports, particularly in connection with transport and installation costs, customs and excise duties and merchants' margins.
- . Difficulties due to timing factors, e.g. lags between imports and re-exports, or production and exports, or imports and import clearances. Leads and lags of this type can be aggravated by irregular and significant build ups or run downs of stocks by producers or merchants or both.

. Difficulties due to limitations in the scope or coverage of statistical collections which are the source of the data being compiled according to the ASCC, e.g. lack of data on sales of commodities produced by manufacturing establishments on commission for non-manufacturing establishments, and of production of manufactured goods by non-manufacturing establishments.

. Difficulties due to lack of detail in the collection of data on non-merchandise trade, and ships' and aircraft stores. (This difficulty might also be regarded as a classification-type problem.)

. Difficulties in making comparisons due to such factors as differences in quality, material composition, substitutability of commodities, variations in the import component of goods produced in Australia or exported from Australia, etc..

. Difficulties in comparing commodity statistics over time due to periodic (annual) changes in the ASCC and its related commodity classifications. Such changes are unavoidable if the classifications and the data collected in accordance with them are to reflect the evolving requirements of users for up to date commodity statistics, both in terms of current technology and analytical requirements.

58 Some of the difficulties mentioned above, especially those of valuation, would not arise if it were possible to collect and compile comparable statistics in terms of quantities rather than values. However, even in the most favourable of circumstances, it would not be realistic to expect that all commodity items in the ASCC and its related classifications could be defined in such a narrow way that it would be meaningful in all cases to compare production and overseas trade commodity statistics in terms of quantities only.

59 Nevertheless, in instances where the possibility exists to compare production and overseas trade commodity statistics in terms of standard units of quantity, some timing difficulties could be avoided by using, in the case of annual production commodity statistics, "quantity of sales and transfers out" rather than "quantity produced" for comparison with imports and/or exports.

**BROAD STRUCTURE OF  
THE ASCC**

BROAD STRUCTURE OF THE ASCC

As explained in the Introduction the ASCC is an "industrial origin commodity classification". This means that the broadest or the most summary level of the classification consists of headings which represent the industries in which the commodities shown in this classification typically originate, i.e. in which they are normally produced.

These industry of origin headings or categories are listed below. They constitute the broad structure of the ASCC.

In general, each industry of origin heading or category in the ASCC is equivalent to a class in the Australian Standard Industrial Classification (ASIC). Where this occurs the code of the "industry of origin" and of the corresponding ASIC class is identical. However, in some cases two or more ASIC classes have been combined for purposes of the ASCC to form a special "combined class", i.e. a single industry of origin. Where this has occurred the "combined class" has been given a unique code not used anywhere in the ASIC, and cases of this type are easily identifiable because two or more "corresponding ASIC class codes" have been shown against the industry of origin title.

**SUMMARY CLASSIFICATION**

SUMMARY CLASSIFICATION

The most detailed commodity categories in terms of which it is possible to compare statistics of commodity imports, exports and domestic production are represented by the 6 and 8 digit standard commodity items in this Classification. These items are usually referred to as ASCC items and are listed in the table below under the industry of origin (class) headings which constitute the broad structure of the ASCC as described in the preceding Section of this Manual.

In the next Section of this Manual, i.e. the Section which contains the detailed Classification, the 6 and 8 digit ASCC items are further explained in terms of their component import, export and production commodity items, i.e. the items in accordance with which the actual import, export and production commodity statistics are collected and/or compiled by the ABS. The detailed Classification also identifies, in footnotes, each instance where an ASCC item is in some way deficient or imperfect - the general nature of the most common types of deficiencies or imperfections of ASCC items is, of course, also discussed in the Introduction. It should therefore be noted that the descriptions of the ASCC items as listed below present only a summary definition of their contents. To obtain a complete definition of the items and their contents, reference should be made to the detailed Classification.

At this point attention is again drawn to the fact, explained in the Introduction, that 6 digit ASCC items generally permit comparisons between commodity statistics of production, imports and exports whereas 8 digit ASCC items only permit comparisons of commodity statistics between either production and imports OR production and exports. In the Section containing the detailed Classification it is easy to determine whether an 8 digit ASCC item permits comparisons between either production and import commodity statistics OR production and export commodity statistics by reference to the component import and export items of the ASCC item. This method cannot be used in the table below. Instead each 8 digit ASCC item which permits comparisons between production and import statistics has been assigned the letter "I" in the right hand margin of the table and each 8 digit ASCC item which permits comparisons between production and export statistics has been assigned the letter "E" in the right hand margin of the table.

CLASS 3164 : METAL COATING AND FINISHING

This ASIC industry of origin has been created separately with no ABCC items listed under it because:

- (i) separate, specific, information is not available on the commodities which originate only from industry class 3164 thereby preventing the creation of meaningful and viable standard items for these commodities;
- (ii) the ABCC, at present, relates only to transportable goods, and a major proportion of the activities primary to this industry is involved in the provision of services (e.g. engraving, polishing, plating and heat treatment of metals);
- (iii) the creation of this separate industry of origin category permits the presentation of standardised commodity items for the other important metal industry classes.

	3353.62.05	- Sewing machines, domestic, complete	I
	3353.62.10	- Heads for sewing machines, domestic	I
3353.64		Floor polishers, domestic	
3353.65		Lawn mowers, electrically driven	
3353.70		Lawn mowers (except electrically driven), rotary undercut type:	
	3353.70.08	- Lawn mowers, rotary undercut type	E
	3353.70.15	- Lawn mowers, rotary undercut type, other (except electric)	E
3353.75		Lawn mowers (except rotary undercut type and electrically driven type):	
	3353.75.05	- Lawn mowers, hand driven	I
	3353.75.10	- Lawn mowers, n.e.s.	I
3353.82		Lawn sprinklers, domestic, and parts therefor	
3353.85		Parts for lawn mowers; parts and accessories for sewing machines (including parts for sewing machine heads); parts for electro-mechanical domestic fans	
3353.87		Parts for clothes driers, household type, electrically operated	
3353.88		Dish washing machines, domestic	
3353.91		Parts for dish washing machines, domestic	

CLASS 1354 : WATER HEATING SYSTEMS

3354.05		Water heaters, instantaneous or storage, non-electric; swimming pool heaters, gas fired; parts therefor:	
	3354.05.03	- Water heaters, instantaneous or storage, non-electric; swimming pool heaters, gas fired	I
	3354.05.10	- Parts for water heaters, instantaneous or storage, non-electric; parts for swimming pool heaters, gas fired	I
3354.09		Water heaters, instantaneous or storage, electric and immersion heaters	

CLASS 1355 : ELECTRIC AND TELEPHONE CABLE AND WIRE

3355.05		Stranded wire, cables, cordage, ropes, plaited bands and the like (except insulated electric wire and cable), of aluminium wire	
3355.10		Stranded wire, cables, cordage, ropes, plaited bands and the like (except insulated electric wire and cable), of copper wire	
3355.15		Insulated electric and telephone cable, wire and strip (other than magnet winding wire)	
3355.20		Insulated electric magnet winding wire:	
	3355.20.05	- Insulated electric magnet winding wire, not exceeding 0.25 mm conductor diameter	I
	3355.20.10	- Insulated electric magnet winding wire, exceeding 0.25 mm conductor diameter	I

CLASS 1356 : BATTERIES

3356.05		Batteries, dry cell type	
3356.10		Batteries, wet cell type, automotive (including motor cycle)	
3356.15		Batteries, wet cell type (non-automotive)	
3356.20		Battery components

MINING PRODUCTION ITEMS KEYED TO STANDARD (ASCC) ITEMS

The following Table lists the codes and title descriptions for production commodity items for mining commodities, and indicates, for each, the code for the standard item (i.e. ASCC item) of which it is a component.

Production Code Title	ASCC Code	Production Code Title	ASCC Code
500 Bauxite	1121.00	579 Other metallic minerals	1129.30.16
501 Copper-lead-zinc ore	1122.00	Black coal:	
502 Copper concentrate	1122.00	580 - Bituminous	1201.00.05
503 Copper ore (excluding ore for fertiliser)	1122.00	581 - Semi-anthracite	1201.00.05
504 Copper ore for fertiliser	1122.00	582 - Sub-bituminous	1201.00.05
505 Copper oxide	1122.00	585 - Other black coal	1201.00.05
506 Copper precipitate	1122.00	586 Brown coal briquettes	1202.00
509 Gold bullion	1123.10	Brown coal:	
510 Gold ore	1123.05	588 - For briquettes	1202.00
511 Gold concentrate	1123.05	589 - Other	1202.00
512 Other gold	1123.05	Crude petroleum (including natural gas):	
Iron ore:		590 - Crude oil	1300.04
513 - Iron ore fines	1111.00.10	591 - Natural gas	1300.08
514 - Lump	1111.00.05	592 - Natural gas condensate	1300.04
515 - Run of the mine	1111.00.05	- Other derivatives:	
Iron oxide for:		593 - Ethane	1300.08
516 - Cement manufacture	1111.00.10	- Liquefied petroleum gases (LPG):	
517 - Coal washing	1111.00.10	594 - Propane	1300.07
518 - Gas purification	1111.00.10	595 - Butane	1300.07
519 - Other	1111.00.10	599 - Other crude petroleum	1300.08
Iron ore:		Construction materials:	
520 - Pellets	1112.00	- Sand and gravel:	
521 Beneficiated ilmenite	1124.05.10	600 - Gravel	1401.00.10
522 Ilmenite	1124.05.16	601 - Sand	1401.00.05
523 Leucokene concentrate	1124.05.20	- Crushed and broken stone:	
524 Monazite concentrate	1124.10	606 - Basalt	1401.00.10
525 Rutile concentrate	1124.05.06	607 - Gneiss, rhyolite, and rhyolite, toscanite	1401.00.10
526 Rutile-zircon concentrate	1124.05.06	608 - Diorite	1401.00.10
527 Wet-mixed concentrate	1124.05.16	609 - Dolomite	1401.00.10
528 Xenotime concentrate	1505.82.21	610 - Granite	1401.00.10
529 Zircon concentrate	1124.05.25	611 - Hornfels	1401.00.10
532 Nickel concentrate	1125.00	612 - Limestone	1401.00.10
533 Nickel ore	1125.00	613 - Quartzite	1401.00.10
535 Lead concentrate	1126.05	614 - Sandstone	1401.00.10
536 Lead-copper concentrate	1126.05	615 - Shale and schist	1401.00.10
537 Lead ore (including silver-lead ore)	1126.05	616 - Other crushed and broken stone	1401.00.10
538 Lead-zinc middlings	1126.05	617 - Dolerite	1401.00.10
539 Silver-gold concentrate	1126.15	- Dimension stone:	
540 Silver-gold ore	1126.15	626 - Basalt	1404.05
541 Silver-lead-zinc ore	1126.08	627 - Granite	1404.05
542 Silver ore	1126.15	628 - Limestone	1404.05
543 Zinc concentrate	1126.08	629 - Sandstone	1404.05
544 Zinc ore	1126.08	630 - Other dimension stone	1404.05
545 Silver concentrate	1126.15	- Other construction materials (decomposed rock, residues, etc.):	
546 Lead-zinc concentrate	1126.08	642 - Earth and soil	1404.10
549 Tin concentrate	1127.00	643 - Filling	1404.10
550 Tin-copper concentrate	1122.00	644 - Salamander	1404.10
551 Tin-tantalite concentrate	1127.00	645 - Scoria	1404.10
556 Antimony concentrate	1129.30.10	646 - Shale	1404.10
557 Antimony ore	1129.30.10	647 - Tuff	1404.10
558 Beryllium ore	1129.30.16	648 - Other construction materials (including shell and coral) for:	1404.10
559 Bismuth concentrate	1129.30.16	656 - Agriculture	1501.00
560 Bismuth-gold concentrate	1129.30.16	657 - Burning	1501.00
561 Chromite concentrate	1129.27	658 - Chemicals	1501.00
Manganese ore:		659 - Cement	1501.00
563 - Metallurgical grade	1129.10	660 - Flux (including in iron and steel and non-ferrous metal industries)	1501.00
565 - Other grades	1129.10	661 - Furnace lining	1501.00
566 Molybdenite concentrate	1129.30.16	662 - Other purposes	1501.00
567 Molybdenum concentrate	1129.30.16		
569 Pyrite concentrate	1129.05		
570 Tantalite-columbite concentrate	1129.20		
Tungsten:			
571 - Scheelite concentrate	1129.15.10		
572 - Scheelite ore	1129.15.10		
573 - Wolfram concentrate	1129.15.05		
574 - Wolfram ore	1129.15.05		
575 Uranium concentrate	1128.00

- (A) This production item is not shown under any ASCC item in this edition of the ASCC. It covers commodities which are primary to ASIC group 044 "Hunting and Trapping" and which are not relevant to any ASCC item in this edition of the ASCC.
- (B) See footnote (c) in ASCC item 2140.58.
- (C) This production item is not shown under any ASCC item in this edition of the ASCC. It covers commodities which are primary to ASIC subdivision 03 "Forestry and Logging" and which are not relevant to any ASCC item in this edition of the ASCC.
- (D) See footnote (b) in ASCC item 2539.10.
- (E) See footnote (c) in ASCC item 2539.10.
- (F) This production item is not shown under any ASCC item in this edition of the ASCC. The commodities covered by it lack separate and specific information and this prevents the creation of viable standard (ASCC) items.
- (G) This production item is not shown under any ASCC item in this edition of the ASCC. Though it covers commodities primary to ASIC division C "Manufacturing", these commodities are diverse in nature and are relevant to many ASCC items. Therefore they have been treated as though they are not covered by specific production items.
- (H) See footnote (b) in ASCC item 2941.41.10.
- (I) See footnote (a) in ASCC item 3163.05.05.
- (J) This production item is not shown under any ASCC item in this edition of the ASCC. It covers commodities which are primary to ASIC division D "Electricity, Gas and Water" and which are not relevant to any ASCC item in this edition of the ASCC.
- (K) This production item is not shown under any ASCC item in this edition of the ASCC. It covers commodities which are primary to ASIC division F "Wholesale and Retail Trade" and which are not relevant to any ASCC item in this edition of the ASCC.
